Risk management

Activity	Risk	Counter measure
Get staff	<ul style="list-style-type: none">● Hiring average or below average staffs such as coders● Early termination of contract/staffs quitting	<ul style="list-style-type: none">● Hiring the best of the best in each field required● Have a list of potential replacements made when conducting hiring interviews
User training	<ul style="list-style-type: none">● Development of an incorrect user interface● Users unable to understand the interface created	<ul style="list-style-type: none">● Prototyping● Developing a user friendly and easy to use interface
Integrate software	<ul style="list-style-type: none">● Subsystem shortfall	<ul style="list-style-type: none">● Ensure each subsystem is meets set requirements

Required resources

For this project we will be requiring 3 team roles that will be assigned to each team member, and they will carry out their respective tasks. The roles required include, systems developer, architect designer, and a Project Manager.

Each role listed below will entail the tasks they will be responsible for carrying out

Systems Developer (Aarez Ansari) -

- Task A (System requirements) Define the system requirements and whatever specifications
- Task D (Integrate Software) - Creating the software components that will be required
- Task C (Software components) - Identifying any software components that will be needed

Architect Designer (Airaj Hussain) -

- Task B (Hardware components) - Identifying any hardware components that will be needed
- Task E (Integrate Hardware) - Creating any hardware components that will be required
- Task I (Install/Testing) - Fully implementing the system and testing for any issues that may occur within the system

Project Manager (Prince Lucky-Worluh) -

- Task F (Write Documents) - Developing documents and creating user manuals for the system, and also for any
- Task G (Get staff) - Acquiring the right staff, interviewing and looking for specific qualifications to get the correct staff
- Task H (User training) - Training the staff in order to be comfortable with the system
